

*Introducing...*

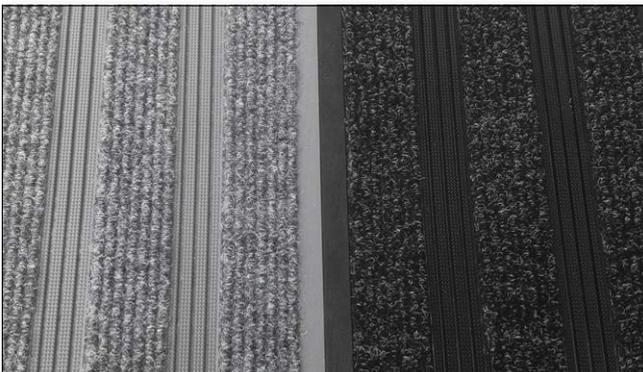

# MODUL by ALUMAT

**MODUL<sup>®</sup> is a new modular  
entrance matting system.**

Especially suitable for large commercial  
entrance ways in shopping malls and schools.

## ALUMAT MODUL<sup>®</sup>

Made in New Zealand from rigid PVC tiles and special European manufactured polypropylene infills

### FEATURES

- Removes even more water and dirt. Multiple drain channels are the key to preventing saturated fibres from releasing water under compression, enabling more water containment.
- Super low profile (just 10mm deep) enables flush fitting with most modern floor finishes without the need for a matwell.
- Easy install on site no matter how large the mat or shape. Simply fit full tiles (500mm x 250mm) in desired location and cut perimeter tiles to complete.
- High compression strength and crush resistance handles the heaviest loading and traffic volumes with ease.
- Available in a colour choice of Silver or Black.
- Ramping options available for use where there is no adjacent floor covering.
- Complies with all building standards, including slip resistance and fire safety standards for entranceways. (ISO9239-1)

• Better performance through better design • Attractive • Cost-effective
